1. Abstract

1. What is the core idea of your project?
2. Why did you choose this project?
3. Is this project solving a real-world problem?
4. What makes your project unique?
5. Who are the target users?
6. Is your project scalable?
7. What is the social impact of your project?
8. How is this project different from existing systems?

2. Introduction

1. Explain your project in simple words.
2. Why is food donation important today?
3. What inspired this project?
4. What technologies does your project use?
5. Who will benefit from this system?
6. Is this project web-based or mobile-based?
7. What is the main objective of this system?
8. Can this system be used by NGOs?

3. Problem Statement

1. What exact problem are you solving?
2. Why existing systems are insufficient?
3. What challenges exist in current donation systems?
4. Is food wastage really a problem?
5. What happens if this problem is not solved?
6. How did you analyze the problem?
7. Is this problem technical or social?
8. Who is affected by this problem?

4. Proposed System

1. What solution are you proposing?
2. How does your system work?
3. What are the main features?
4. How is OTP verification useful?
5. How do users interact with the system?
6. What happens after donation submission?
7. How do riders complete delivery?
8. How does admin monitor the system?

5. Objectives

1. What are the objectives of your project?
2. What is the primary objective?
3. What are the secondary objectives?
4. How does your project reduce wastage?
5. How does it improve transparency?
6. Does it ensure accountability?
7. Is user experience an objective?
8. Is security an objective?

6. Scope of the Project

1. What is the scope of this project?
2. Who can use this system?
3. Is it limited to food donation only?
4. Can it be extended to other items?
5. Is it suitable for large-scale deployment?
6. Can it be converted to a mobile app?
7. Is location-based tracking possible?
8. Can organizations use this system?

7. System Architecture

1. Explain the architecture of your project.
2. Is it client-server based?
3. How frontend and backend communicate?
4. What APIs are used?
5. How is data stored?
6. How authentication works?
7. Is architecture scalable?
8. What happens on request-response flow?

8. Technology Stack

1. Why did you choose React?
2. Why Node.js for backend?
3. Why MongoDB as database?
4. What is JWT used for?
5. Why bcrypt for passwords?
6. Why Vercel and Render?
7. Is your stack industry-relevant?
8. Can this stack handle load?

9. Module Description

1. Explain User module.
2. Explain Rider module.
3. Explain Admin module.
4. How modules interact?
5. Are modules independent?
6. How data flows between modules?
7. Which module is most critical?
8. How access control is handled?

10. Database Design

1. Why MongoDB?
2. What collections are used?
3. Explain User schema.
4. Explain Donation schema.
5. Explain Advertisement schema.
6. How relationships are handled?
7. Is normalization used?
8. How indexes help performance?

11. API Design

1. What is REST API?
2. How many APIs did you build?
3. Explain login API.
4. Explain donation API.
5. Explain delivery API.
6. Explain admin APIs.
7. How errors are handled?
8. How API security ensured?

12. Security Implementation

1. How passwords are secured?
2. What is JWT?
3. Why OTP verification?
4. How sessions are managed?
5. How unauthorized access prevented?
6. Is data encrypted?
7. How admin access is protected?
8. What security risks did you consider?

13. Deployment Details

1. Where is frontend deployed?
2. Where is backend deployed?
3. What challenges in deployment?
4. What is cold start issue?
5. How environment variables managed?
6. How database connected?
7. How updates are deployed?
8. Is system live now?

14. Testing Strategy

1. How did you test the project?
2. What types of testing used?
3. Did you test APIs manually?
4. How UI bugs were tested?
5. How OTP flow tested?
6. How role-based testing done?
7. Did you test edge cases?
8. How errors were handled?

15. Challenges & Future Enhancements

1. What challenges did you face?
2. How did you solve them?
3. What did you learn?
4. What features can be added?
5. Can GPS tracking be added?
6. Can payment integration be added?
7. Can mobile app be developed?
8. How can scalability be improved?
